Pipette Decontamination

Please enter brand - Eppendorf, Biohit, Gilson etc and serial number. Copy this page if necessary.

Description of Pipette	Serial Number	Comment

We recommend that filters or filter tips be used to avoid internal contamination. Please remove tip cone filters as part of the cleaning process and ensure that pipettes have been cleaned and decontaminated from dangerous materials, for example chemical, biological, radioactive, bacteriological etc. **NOTE – We will be using tips recommended by the manufacturer for calibration. We recommend that users do the same. Especially important for small volumes.**
